

Gravity

When the apple falls from the tree

It's gravity

When the ground holds on to me

It's gravity

When the apple falls from the tree

It's gravity

When the ground holds on to me

It's gravity

Gravity is a friend of mine

It helps me get around

When I've got to get to class

Or somewhere fast

It sure does help to have your feet on the ground

When the Earth's where you should be

You need gravity

When the moon pulls on the sea

It's gravity

All the stars and galaxies

Formed by gravity

And even you and me

Exert gravity

Though it's hard for us to see

We need gravity

If it wasn't for gravity
We might be floating round in space
I'd float right past and say how do you do?
What a fine day to be floating with you
When the Earth's where you should be
You need gravity

If gravity had never been here
There never would've been an atmosphere
The sun wouldn't be a ball of gas
That pulls us into orbit, cause we have mass
It helps the planet stay on course
It's a part of life
It's a fundamental force

It's gravity...

When light falls into a black hole
That's when you don't know
If you're gonna eat
Your spaghetti on the ceiling
