

## Choosing the right option: add, subtract, multiply or divide

State whether you need to **add, subtract, multiply or divide** to find the answers to the following problems. (There's no need to solve them.)

1. Ciaran offers to buy some bottles of water for his students. The bottles of water cost 85p each. He has £8.50. How many bottles of water could he buy?
2. The time is 2.25 pm and Ruth needs to leave the house at 3.30 pm to meet a friend. How long does she have before she has to leave?
3. Shannon bought the following items:  
Pizza £4.00  
Bananas £0.42  
Milk £0.88  
  
How much did she spend altogether?
4. Julia bought 3 cartons of milk. Each carton cost 48p. How much did she spend on milk?
5. Carlos bought a jacket in a half-price sale. The jacket cost £34 originally. How much did he pay in the sale?
