

Recognising angles in the real world

Shapes and angles are everywhere around us. Many of the angles will be right angles (90°) but not all. Look at the examples in the pictures:

Look around you. Find as many angles as you can that are **not** right angles (90°). Note down **where** you've seen these angles and decide whether they're **bigger than** or **less than** 90° .

Discuss your findings with someone else.
