

## Examples of everyday and mathematical words - answers

See the examples of **everyday and mathematics words pictionary** task worksheet for examples.

Other examples could include:

- **prime**, which means the most important in the everyday and is a number with no divisors in mathematics
- **product**, which relates to items being bought and sold in the everyday and the result of multiplying in mathematics
- **right**, which means correct in the everyday and  $90^\circ$  in mathematics
- **possible** usually means 'possible but unlikely' in the everyday, whereas in mathematics it can span unlikely to certain - eg we say it's possible to win in a raffle we usually don't expect it to happen
