

Percentage squares - answers

1. Match these percentages to the shaded parts:  
20%, 25%, 12%, 15%.

Correct answer:

2. What percentage of the grid in question 1 is not shaded?

Correct answer: **The part not shaded is 28%.**

You can count the white squares to find this. Or you can add the shaded parts then take the total away from 100.

Shaded parts total is  $25\% + 12\% + 15\% + 20\% = 72\%$ .  
The whole grid has 100 squares. So take 72 away from 100.  
 **$100\% - 72\% = 28\%$ .**

3. Circle the diagram that **does not** show 40%.
