Simplifying fractions to whole numbers

To find out if a fraction can be simplified to a whole number, try dividing the top by the bottom number.

1. $\frac{8}{4}$ [ ] 8 ÷ 4 = 2 with no remainder. So $\frac{8}{4}$ **= 2**.
2. $\frac{7}{9}$ [X]
3. $\frac{12}{6}$ [ ] 12 ÷ 6 = 2 with no remainder. So $\frac{12}{6}$ **= 2**.
4. $\frac{15}{5}$ [ ] 15 ÷ 5 = 3 with no remainder. So $\frac{15}{5}$ **= 3**.
5. $\frac{17}{7}$ [X]
6. $\frac{18}{9}$ [ ] 18 ÷ 9 = 2 with no remainder. So $\frac{18}{9}$ **= 2**.
7. $\frac{14}{3}$ [X]
8. $\frac{22}{11}$ [ ] 22 ÷ 11 = 2 with no remainder. So $\frac{22}{11}$ **= 2**.
9. $\frac{10}{12}$ [X]
10. $\frac{14}{6}$ [X]
