

Estimating weights of packages - answers

1. What's the maximum weight of a letter?

You can send something as a letter if it weighs **up to 100 grams**.

You'll also need to check its size. If it's too large, it will be a large letter, even if it weighs less than 100 grams.

2. How much heavier is this than the previous weight limit of 60g?

This is an increase of **40 grams** (100 g - 60 g).

3. What's the maximum weight of a large letter?

You can send something as a large letter if it weighs **up to 750 grams**.

Once again though, you'll need to check that whatever you're sending isn't too large, otherwise it will be a packet.

4. Is something that weighs 1 kilogram a letter, large letter or packet?

Anything weighing 1 kilogram (1,000 g) is a **packet**.
