Recognising angles in the real world - answers

You may have found the following:

Octagonal tiles have angles of **more than 90° (135°)**.

The square inside these tiles has right angles.

Many **traffic signs** have angles **less than 90° inside (60°)**.

Patterns of **hexagons**, such as honeycombs, have angles **bigger than 90° (120°)**.

There are many other objects with angles that aren't standard.
