

This right here is the Solar System,
The Sun is at its centre.
I'mma teach you about this all so,
Lock right in this is an adventure.

Mercury, Venus, Earth, Mars,
Jupiter, Saturn, Uranus, Neptune.
Planets orbit stars,
Orbiting planets, we have the moons.

Let's start with our very own star,
We call this one the Sun.
It's surrounded by eight planets,
Of which Earth is one.

Each planet spins on its axis,
One full spin we call one day.
This side's daytime when in light,
And nighttime the other way.

Mercury, Venus, Earth, Mars,
Jupiter, Saturn, Uranus, Neptune.
Planets orbit stars,
Orbiting planets, we have the moons.

One trip around the Sun's an orbit,
Each planet takes a different time.
Mercury's is 88 days,
Earth's is 365!

Sun, planets, in we zoom,
Orbiting Earth, we have the Moon.
It moves around the Earth this way,
It takes 27 days.

Mercury, Venus, Earth, Mars,
Jupiter, Saturn, Uranus, Neptune.
Planets orbit stars,
Orbiting planets, we have the moons.
