

## **Understanding pictograms**

In a pictogram pictures are used to represent numbers. This can make information interesting to look at and easy to understand. It is very important to check the key to find out what each picture represents.

In the pictogram below each represents 1 hour of sunshine. So 4 hours of sunshine were recorded on Friday and 8 hours were recorded on Sunday.

## Sunshine hours recorded at Moreton Bay w/e 15th July

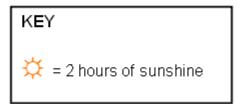

Friday	<b>\$\$\$</b> \$
Saturday	\$ \$ \$ \$ \$
Sunday	* * * * * * * * *

Notice in the next example that the key has changed. This time each  $\stackrel{\frown}{\hookrightarrow}$  represents 2 hours of sunshine. In both cases the information being shown is the same, but the pictograms look slightly different.

## Sunshine hours recorded at Moreton Bay w/e 15th July

Friday	<b>\$ \$</b>
Saturday	<b>\$\$</b> \$\$
Sunday	<b>\$\$\$</b> \$

Did you notice that one of the symbols is cut in half? In a pictogram the symbols must always be the same size, but you can show a part of them to represent a different amount, here:

What main features do pictograms have?

- They must have a title.
- They must have a **key** to show what each symbol or picture means.
- Each picture must be of identical size.
- They can display pictures in row or columns.
- Can use parts of a picture to represent smaller numbers.
