

## Interpreting a bar chart

The bar chart below does not have a title and other important information is missing:

Use your imagination and knowledge of bar charts to help make sense of this example. You will need to think of a suitable **title** that explains what the bar chart is all about.

You will also need to **label** the **horizontal** and **vertical axes** and add a **key** to show what each coloured bar means.

If you can, discuss your ideas with someone who can check that your bar chart now makes sense.
